BIG BOLD IDEA

Build a world free of police violence on American soil by eliminating barriers to reporting police misconduct through easily accessible mobile tools and data that measure the impact of policing in real time.

ORGANIZATION OVERVIEW

Raheem AI aims to increase police transparency and accountability by eliminating barriers to reporting police misconduct. Its mobile tools deliver communities a secure, anonymous, and easy way to report and review police interactions. A lack of clear, actionable data plays a major role in enabling police violence. Raheem AI is closing this gap by collecting and publishing data to be used to mobilize communities and advance evidence-based policy solutions that end police violence.

PERSONAL BIO

Brandon D. Anderson is founder and CEO of Raheem AI. Brandon is motivated by a desire to improve the quality of life for black and brown families and other victims of systemic discrimination. During his service in the U.S. Army as a satellite engineer, he began using technology as a problem-solving tool. Following the loss of his partner to police violence and realizing his own risk of victimization as a black man, Brandon recognized an opportunity to integrate his skills with his commitment to the pursuit of justice. Brandon served two tours in Iraq, holds a BA from Georgetown University, is a Smithsonian American Ingenuity Award Nominee, and was named one of 100 Black LGBTQ Leaders to Watch by the National Black Justice Coalition.
